

Further project information

Company name	KNOTEN WEIMAR Internationale Transferstelle GmbH
Project title	Construction and operation of a recycling centre
Short description of the project	The Wagner Kieswerke GmbH and Cambodian waste disposal company CINTRI intend the construction and operation of a recycling centre in the Cambodian city Sihanoukville. The waste of the city should be separated. Valuable materials like plastic or metal will be sold. Biowaste will be treated in a composting plant to produce compost. The projects comprises also information campaigns for the people and further education courses for the plant operator and CINTRI. It is expected that the establishment of the recycling centre reduces the amount of dumped waste and thus the pollution of the environment The KNOTEN WEIMAR GmbH support the project management and the economical assesment of the recycling center.
Project classification	Training, Consulting, Capacity Building, Recycling and biowaste treatment
